

Lodiag is a young innovative company with a mission to identify a large panel of micropollutants in various water matrices. With a strong expertise and quality environment (ISO 9001 and ISO 17025), Lodiag offers you a range of unique analytical services. The company is also involved in several research projects aimed at pushing back the current limits of knowledge in order to offer you ever more innovative services. Located in Huningue, Lodiag is part of the Firalis group, whose headquarters includes more than 2000 m² of R&D and production laboratories.

To strengthen the R&D programs and related services within our company, we are looking for a:

LC-MS engineer

Job description

- Manage a team of 2-3 lab technicians for the organisation of routine analysis;
- Perform analyses of micropollutants (pesticides, pharmaceuticals, metabolites) in water samples by HPLC-HRMS;
- Analyse data and report results;
